

SWED/CUT® MicroKote®

Series 700 S + 700 G Coated Carbon Steel Blade

The flexibility of our coating line enables us to continue our strong product development work. Now we meet the future needs of our customers even better.

The coated blade emerged originally from printers' demand for a blade eliminating problems like hazing, lines and blade hair formation, especially in the food packaging area. During testing we have learned that the coating also increases blade life since friction is reduced. The base material of this blade has the same advantages as the M-Flex® II doctor blade.

The advantages of SWED/CUT® MicroKote® Doctor Blade

For S + G:

- The printing quality is improved as particle-sticking is avoided
- Problems with bad ink and print quality caused by particles and blade hair are reduced
- Blade life is increased
- The coating is composed to reduce blade friction, wear on printing cylinders and ink-sticking
- A clearer print result is achieved

For G:

- Same characteristics as S
- Coating layer improved to reduce "run-in time"
